EDUCATION

University of California, Davis

Expected June 2026

Bachelor of Sciences in Computer Science and Statistics

Relevant Coursework: Algorithm Design and Analysis, Computer Architecture, Data Structures and Algorithms I and II, Abstract Mathematics, Probability and Statistical Modeling, x86 Assembly Language Processing, Linear Algebra, Discrete Mathematics, Introduction to AI, Machine Learning, Computer Graphics, Computer Networks, Programming Languages, Information Interfaces, Operating Systems, Regression Analysis

WORK EXPERIENCE

Undergraduate Researcher

Apr. 2025 - Present

UCD Biology and Agriculture Engineering Lab

- Researching machine learning models to accurately predict the safety of ATVs accounting for longitudinal and latitudinal angles using **Pytorch** and **TensorFlow**
- Utilizing **Python** for acquiring sensor data through USB and RS-485 communication protocols and **Pandas**, **NumPy**, and **Matplotlib** to clean and visualize 100 data points

Web Developer Coordinator

Oct. 2024 - Present

ASUCD Pantry

- Spearheading development of volunteer management system with **Flask**, **NextJS**, and **PostgreSQL**, leading a 4-person team to streamline shift scheduling for ASUCD Pantry's 100+ monthly volunteers
- Developing a full-stack application using **Flask** and **NextJS**, implementing user authentication and automated email notifications to reduce volunteer on-boarding time by 50 percent
- Creating a **PostgreSQL** database schema for tracking volunteer metrics and shift management, enabling data-driven decisions that improved volunteer retention and administrative efficiency

Undergraduate Researcher

Jul. 2024 - Jan. 2025

University of California, Berkeley

- Assisted the development and deployment of ChatCHW, a specialized Large Language Model (LLM) that increased healthcare access for 250,000+ underserved individuals across rural India, implementing retrieval-augmented generation and custom prompting techniques to achieve 87% accuracy in primary care tasks
- Conducted comprehensive research on LLM capabilities in healthcare settings, utilizing **TensorFlow**, **PyTorch**, and Hugging Face libraries to train and evaluate multiple transformer architectures on a dataset of 50,000+ medical queries, optimizing for low-resource environments through knowledge distillation and quantization

Software Engineering Intern

Jun. 2024 - Sep. 2024

Neoteric Solutions Inc.

- Architected and optimized 6 high-traffic eCommerce platforms utilizing Shopify's **Liquid JavaScript** framework, resulting in 42% improved page load times and a record-breaking 11,000 transactions during a 30-minute flash sale
- Engineered an AI-powered customer service chatbot using **SuiteScript 2.0** integrated with **RESTful APIs**, reducing response times by 400% and handling 85% of routine inquiries without human intervention
- Implemented comprehensive **SEO optimization** strategies including structured data markup, semantic HTML5, and **Google Analytics** integration across 12 client websites, resulting in a 56% increase in organic traffic and 38% improvement in SERP rankings

PROJECTS

Cryptocurrency Prediction Model

Nov. 2024

- Engineered a Full-Stack deep learning model for Bitcoin price prediction, utilizing historical data and neural network techniques to identify trends and create a **LSTM** model
- Assessed model accuracy using statistical evaluation metrics like Mean Squared Error (MSE) and Mean Absolute Error (MAE) to validate results to an accuracy of 1000 dollars

TECHNICAL SKILLS

Languages: Python, C++, SQL, JavaScript, C, Swift, R, Go

Tools: Pytorch, TensorFlow, Github, Pandas, NumPy, ReactJS, React Native, NextJS, HTML, REST APIs, CSS, PostgreSQL, Firebase, OpenAI API, Figma, OpenCV, AWS, Flask, Django
